                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       β
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gone mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at fit, wipo.int/pub/published_pct_sequences.

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
```

polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The Copynucleotides are also used in diagnostics as expressed sequence tags (II). (II) is useful in gene thorapy techniques (II), (II) and its binding partners are useful in medical imaging of sites expressing (II), (II) and (II) are useful in medical imaging of sites expressing (II), (II) and (II) are useful for treating CC imaging of sites expressing (II), (II) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC anino acid sequences. AAS64197-AAS94564 represent novel human of all forms of the invention.

Note: The sequence data for this patent did not appear in the printed at the products of the printed of the products of the products of the products of the printed of the products of t

                                                                                                                                                                                                                                                                                                                                     The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-FEB-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; gene expression; heart; microarray; vascular system; probe; cardiovascular disease; hypertension; cardiac arrhythmia; congenital heart disease; ss.
The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-JAN-2001; 2001WO-US00666.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09-AUG-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Probe #2522 for gene expression analysis in human heart cell sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-JAN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABA24056 standard; DNA;

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's diseases, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 495 BP; 121 A; 174 C; 129 G; 71 T; 0 other;

                                                                                                                                                                        Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo. NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; on bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be coation/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; on bw sp, the same strain used for the BDGP's PI and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and melanogaster additional melanogaster back in the properties of the Roswell Park Cancer Institute in Buffalo, Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AL053013

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                  Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      resulting mRNA encodes a truncated soluble protein which contains to 1, 22, D3 and 8 new amino acid residues. LAG-3V2 cDNA was obtained by RT-DCR amplification (see AAW06759 and AAW06762) of peripheral blood mononuclear cell RNA. The invention provides 3 splice variants (see AAW88359-61) of LAG-3 and nucleotide sequences encoding them (see AAW06754-56). The LAG-3 variants can be used in, or for the manufacture of, therapeutic compositions used to treat immune-related pathologies (claimed), in particular Thi-dependent diseases such as Hashimoto's thyroiditis, type I diabetes mellitus, multiple sclerosis, Crohn's disease, rheumatoid arthritis, acute allograft rejection, acute graft-versus-host disease, Grave's ophthalmopathy, cerebral malaria, lyme arthritis, reactive arthritis, Crohn's disease, Scroperial according colongitis, contact dermatitis, unexplained recurrent abortion, aplastic anaemia and Helicobacter pylori-induced gastric antritis. LAG-3 variants can also be used for the manufacture of immunomodulator compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This cDNA encodes LAG-3V3 (see AAW88361), a splice variant of human lymphocyte activation gene 3 (LAG-3) protein. LAG-3V3 derives from cleavage of the nuclear transcript at a different polyA site located approximately 170 bp downstream to the 5' end of intron 5. The retained intron 5 sequence contains an in-frame stop codon. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Qy
            LAG-3V2 CDNA was obtained by RT-PCR amplification (see AAX06759 and AAX06762) of peripheral blood mononuclear cell RNA. The invention provides 3 splice variants (see AAX06754-56). The LAG-3 and nucleotide sequences encoding them (see AAX06754-56). The LAG-3 variants can be used in, or for the manufacture of, compositions used to treat immune-related pathologies (claimed), in particular Th1-dependent diseases such as Hashimoto's thyroiditis, type I diabetes mellitus, multiple sclerosis, Crohn's disease, rheumatoid arthritis, acute allograft rejection, acute graft-versus-host disease, Grave's ophthalmopathy, cerebral malaria, Lyme arthritis, reactive arthritis, Contact
                                                                                                                                                                                                         This cDNA encodes LAG-3V2 (see AAW88360), a splice variant of human lymphocyte activation gene 3 (LAG-3) protein. LAG-3V2 lacks exon 6 due to the ligation of the donor site of intron 5 to the acceptor site of intron 6. There is no frame shift. The LAG-3V2 protein is
                                                                                                                                                                                                                                                                                       Claim 1; Page 24-25; 49pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The FDC cDNA was isolated from a natural cytotoxic lymphocyte cDNA library constructed in lambda gt10. The LAG-3 can be expressed in insect cells (i.e. Spodoptera frugiperda SF9 cells) in membrane-bound and soluble forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human lymphocyte membrane protein and DNA encoding it (LAG-3) - useful for antibodies and pharmaceutical products used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1871 BP; 300 A; 671 C; 524 G; 376 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) group 1 molecule. The disorders are small and non-small cell lung cancer, melanoma, colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a DNA encoding human lymphocyte activation gene-3 (LAG-3). This small cell lung cancer associated gene is designated as NY-SCLC-12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encodisolated nucleic acid comprising an NA Group 3 or 4 molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; small cell lung cancer; therapy; hCAAP; nucleic acid; NA; melanoma; cancer; colon; breast; head; neck; transitional cancer; leimyosarcoma; lymphocyte activation gene-3; LAG-3; synovial sarcoma;

This CDNA encodes LAG-3V1 (see AAW88359), a splice variant of human lymphocyte activation gene 3 (LAG-3) protein. LAG-3V1 is derived from the retention of intron 4, i.e. cleavage at the donor and acceptor sites flanking intron does not occur. An in-frame stop codon located after 8 codons in the retained intron 4 leads to a 36 kDa truncated soluble LAG-3V1 cDNA was obtained by RT-PCR amphification (see AAX06757-58) of peripheral blood mononuclear cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RNA. The invention provides 3 splice variants (see AAW88359-61) of LAG-3 and nucleotide sequences encoding them (see AAX06754-56). The CLAG-3 variants can be used in, or for the manufacture of, pharmaceutical or therapeutic compositions which are used to treat immune-related pathologies (claimed), in particular Thi-dependent diseases such as Hashimoto's thyroiditis, type I diabetes mellitus, multiple scierosis, Crohn's disease, rheumatoid arthritis, acute allograft rejection, acute graft-versus-bost disease, Grave's ophthalmopathy, cerebral malaria, Lyme arthritis, reactive arthritis, dermatitis, unexplained recurrent abortion, aplastic anaemia and the Helicobacter pylori-induced gastric antritis. LAG-3 variants can also be used for the manufacture of immunomodulator compounds (claimed), which can mimic or alter the biological function of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                     FDC cDNA was isolated from a natural cytotoxic lymphocyte cDNA library constructed in lambda gt10. It encodes LAG-3, a membrane-bound protein. A soluble form (LAG-35) of the protein can be produced in insect cells (i.e. Spodoptera frugiperda SF9 cells) by removing the transmembrane region-coding sequence. This construct encodes the first 3 extracellular Ig-like domains of LAG-3 (V domain and two C2 domains) fused to a 17 amino acid fragment of the insect protein polyhedrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immunomodulators for treating autoimmune disease, for controlling graft rejection and in anticancer immunotherapy (e.g. of leukaemia and melanoma), and also to produce antagonists or agonists of the interaction between LAG-3 and Class II major histocompatibility molecules. Cells in which the mutants are exposed at the surface are useful in binding/adhesion assays to study binding to particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein encoded by lymphocyte activating gene 3 (LAG-3). The sequence is used to create mutants AAW62901-02. The mutants have reduced, or no, affinity for Class II molecules. These mutants are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New mutants of lymphocyte activating gene-3 protein - comprise extracellular domains, having reduced interaction with Class II molecules, useful as immuno-modulator for treating, e.g. auto-immune
antiinflammatory; cancer; eye disease; arteriosclerosis; anaemia;
                                                                                                                                        Human immune system associated gene SEQ ID NO: 1126.
                                                                                                                                                                                                                                                                             ABL33153 standard; DNA; 5689

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, ADDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatoryvulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of human metastasis associated genes which are modified by cytosine methylation. The sequences can be used in the diagnosis and treatment of cancer. The present sequence is one of the genes of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                               5120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzhehmer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of human metastasis associated genes which are modified by cytosine methylation. The sequences can be used in the diagnosis and treatment of cancer. The present sequence is one of the genes of the invention.
